Project Overview

FactNova is an AI-powered fake news detection platform designed to identify misleading and false information using Machine Learning and NLP techniques.

Problem Statement

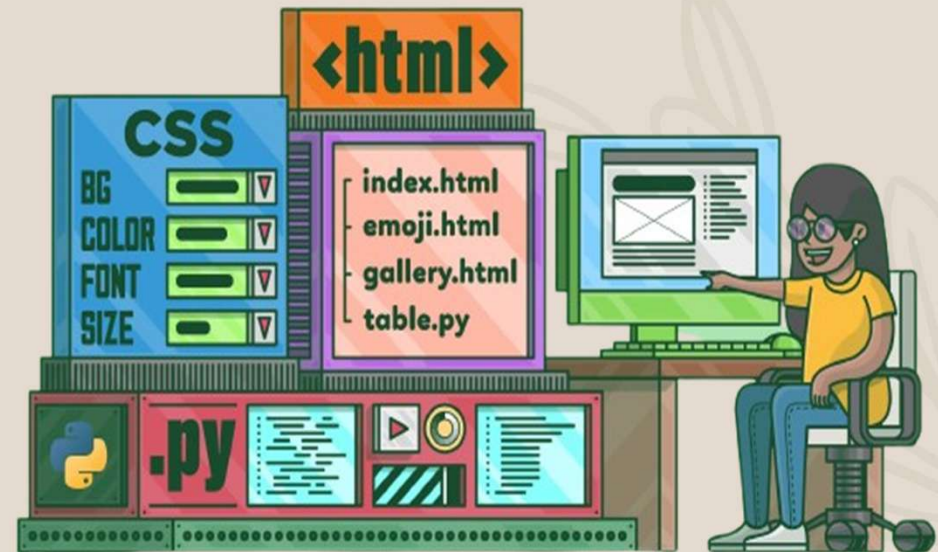

THE RAPID SPREAD OF FAKE NEWS ON DIGITAL PLATFORMS CREATES MISINFORMATION AND CONFUSION. OUR PROJECT AIMS TO DETECT FAKE NEWS AUTOMATICALLY AND PROVIDE TRUSTWORTHY RESULTS IN REAL-TIME.

Project Objectives

- ❖ Detect fake and real news accurately
- ❖ Provide real-time analysis
- ❖ Build a user-friendly dashboard
- ❖ Use AI and NLP for content verification
- ❖ Reduce misinformation spread

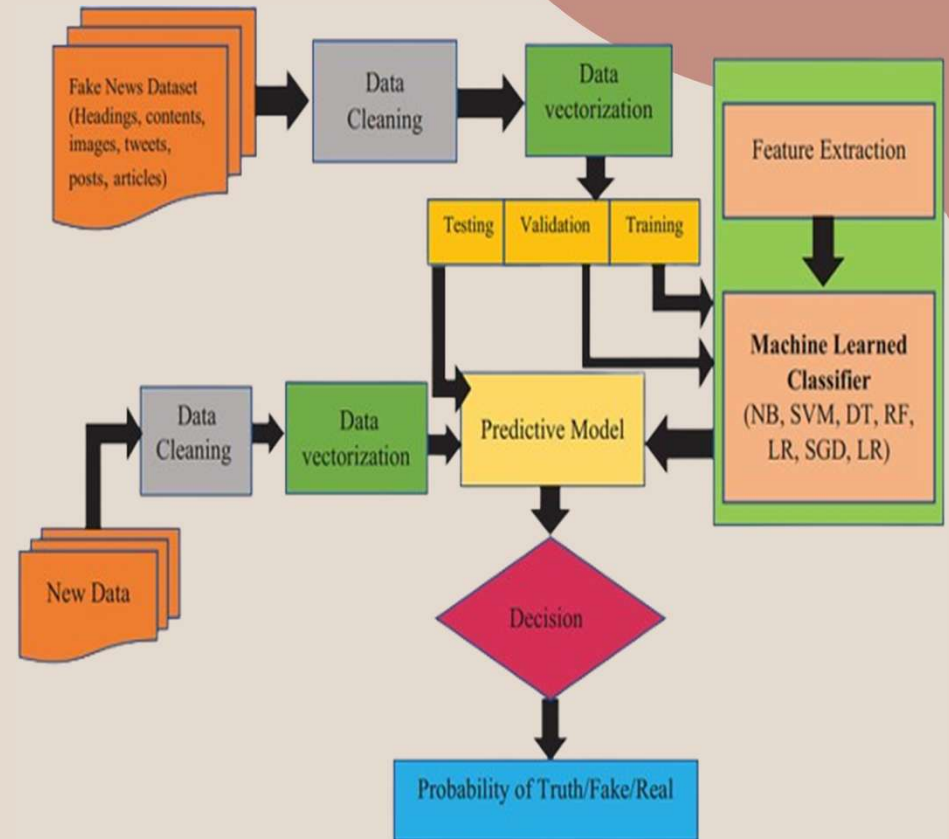

Technologies Used

- PYTHON
- FLASK
- MACHINE LEARNING
- NLP
- HTML
- CSS
- JAVASCRIPT
- SQLITE DATABASE

System Workflow

1. User inputs news article or URL
2. Text preprocessing and cleaning
3. NLP feature extraction
4. ML model prediction
5. Result displayed as Fake or Real News

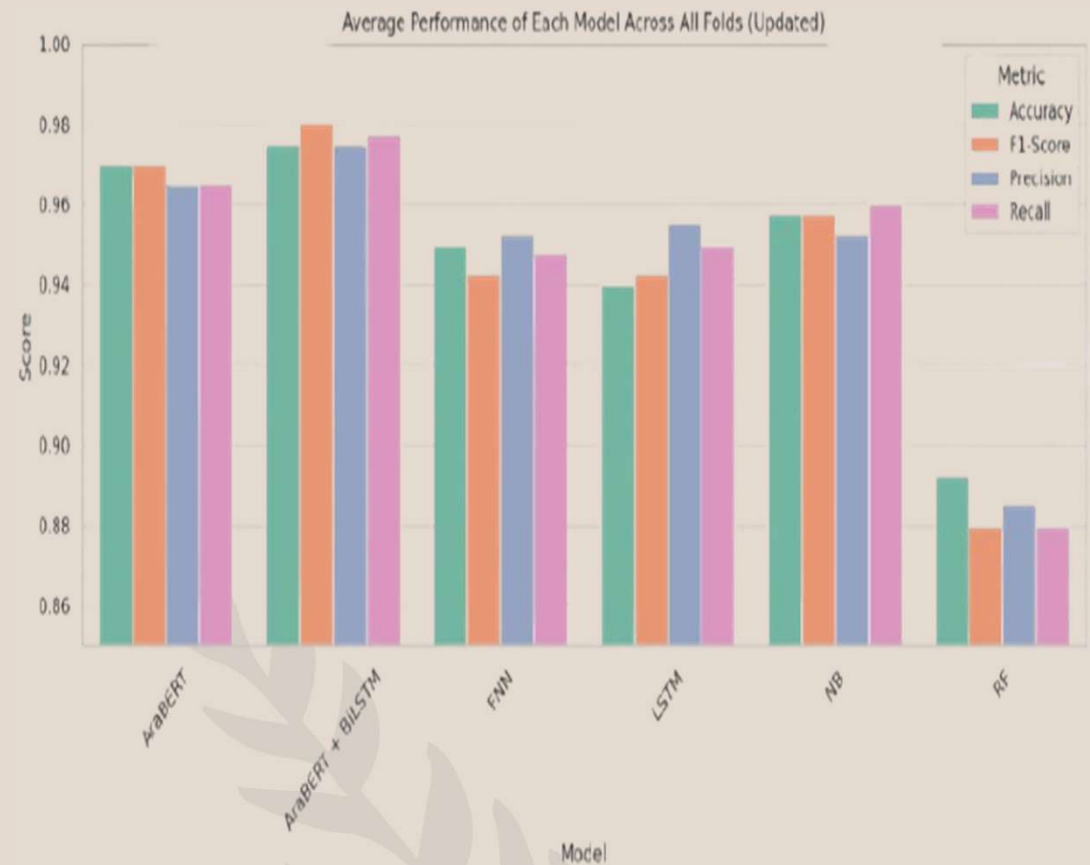

Key Features

- ❑ AI-Powered NLP Engine
- ❑ Real-Time Detection
- ❑ Source Credibility Checking
- ❑ Smart Dashboard Analytics
- ❑ User Feedback System
- ❑ Multilingual Support

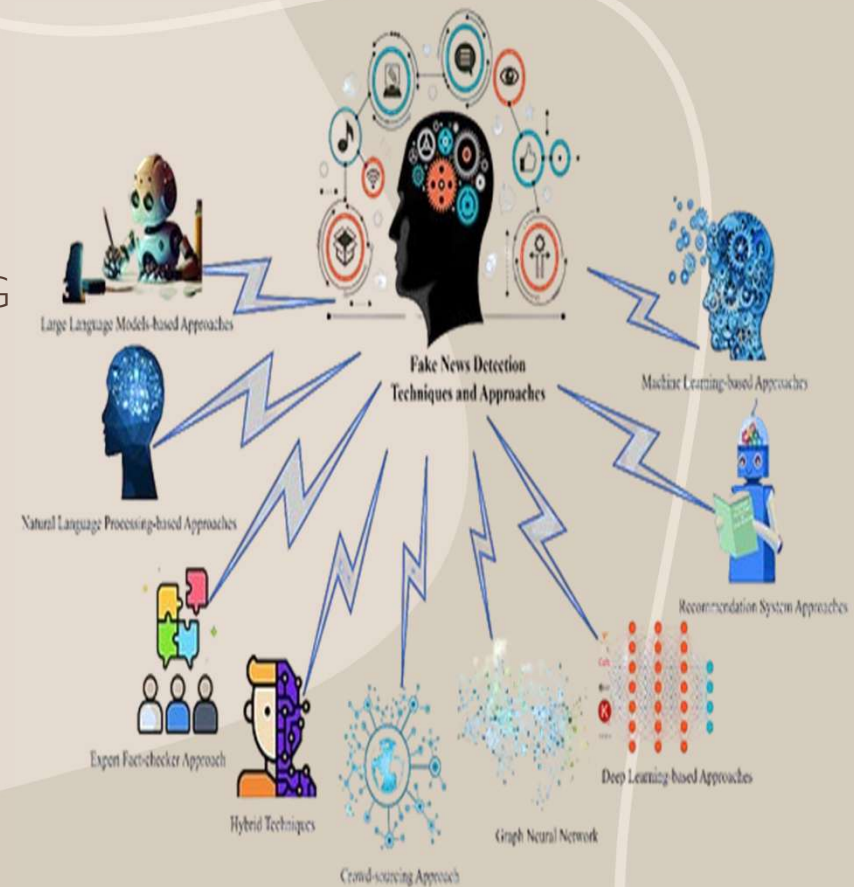

Project Results

- Successfully classified Fake and Real News
- Responsive Web Application
- Real-time prediction with confidence score
- Interactive dashboard for analytics
- User-friendly and responsive interface
- Modern Card Based Layout
- Informative graph

Future Scope

- ❖ IMPROVE MODEL ACCURACY USING DEEP LEARNING
- ❖ ADD MULTILINGUAL FAKE NEWS DETECTION
- ❖ INTEGRATE SOCIAL MEDIA APIS
- ❖ DEPLOY ON CLOUD PLATFORM
- ❖ BROWSER EXTENSION FOR REAL-TIME ANALYSIS

Thank you
